PERSONAL PROJECTS

WordBrain Solution Finder
- A project written in C++ and Java that uses backtracking and file I/O to present solutions for a puzzle in the popular mobile game WordBrain.

Hotel Project
- A project written in Java and C# that uses a GUI and a MySQL database to simulate a hotel reservation system.

AVMisc
- This project is written in Java and uses several libraries to provide the user access to various items on the system such as files, microphone, speaker, webcams, clipboard, etc.
- The program can take pictures and videos from the webcam, take screenshots, log keystrokes, upload and download files, playback and record audio files, and stream audio from the device to another computer.
